

ASTM COMPASS[®]

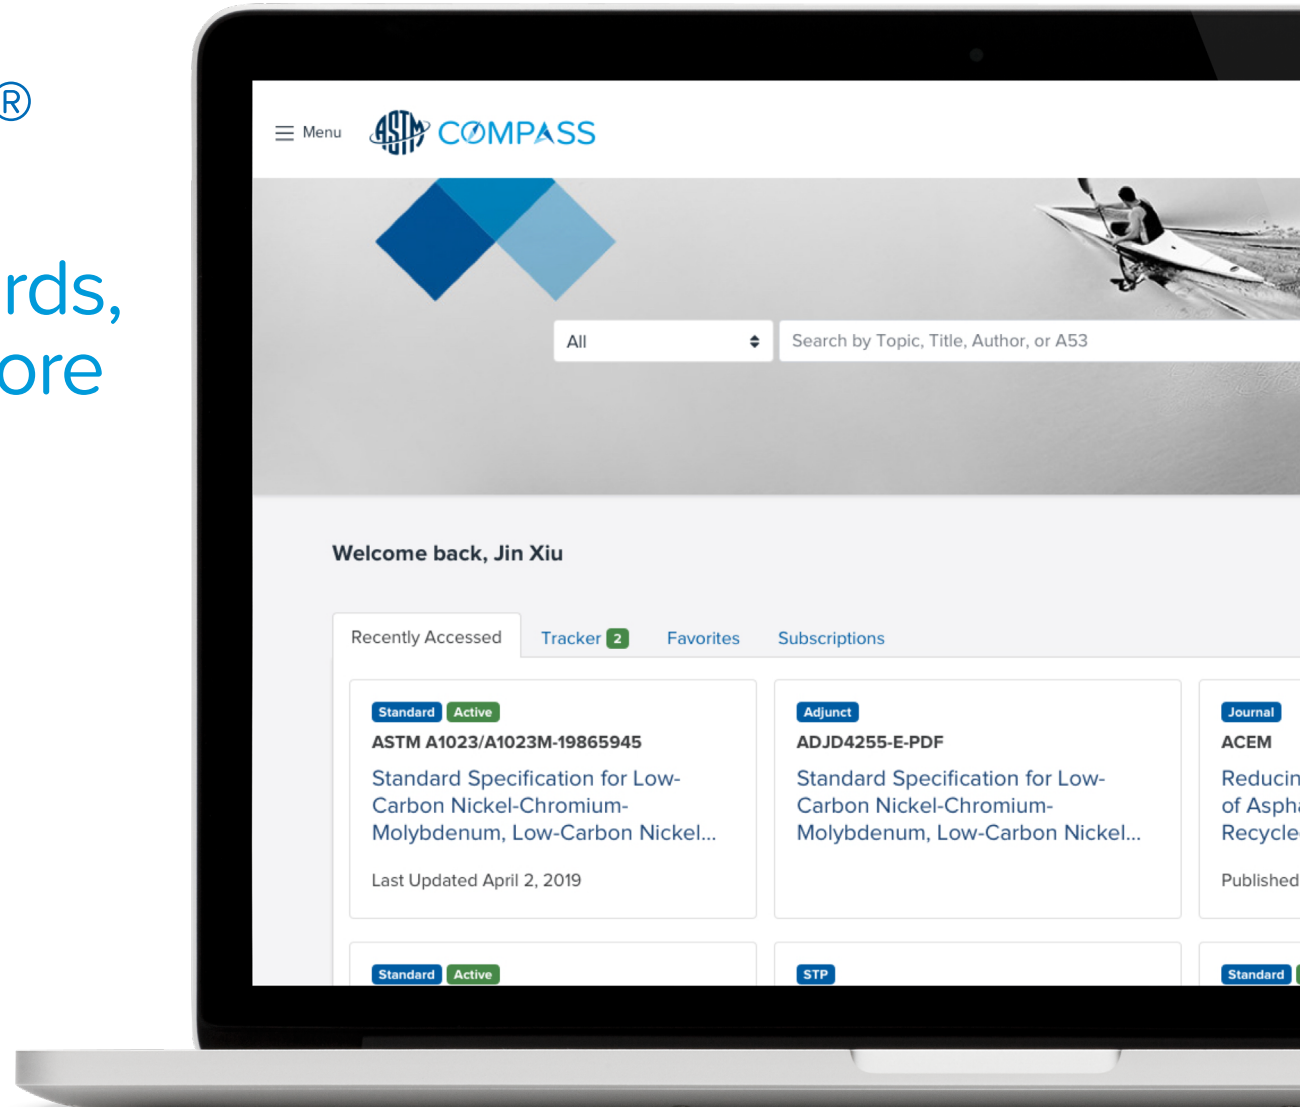

Your Portal for Standards,
Testing, Learning & More

Quick Reference Guide

Thank you for subscribing to ASTM Compass[®] — an easy-to-use solution for accessing, managing and sharing technical information organization-wide.

Combining proven industry standards and technical publications with intuitive management tools, ASTM Compass enables you tackle mission-critical work with a greater expertise, speed and efficiency.

ASTM A1023/A1023M-1986S945

Standard Specification for Low-Carbon Nickel-Chromium-Molybdenum, Low-Carbon Nickel Steel Ropes

HTML PDF Work Items Visual Content Related Content

This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

In This Standard

- Section 1 Scope
- Section 2 Referenced Documents
- Section 3 Terminology
- Section 4 Ordering Information
- Section 5 Material
- Section 6 Rope Properties and Tolerances
- Section 7 Rope Workmanship and Finish
- Section 8 Testing and Compliance
- Section 9 Packaging and Identification
- Section 10 Keywords

SUMMARY OF CHANGES

Footnotes

1. Scope

1.1 This specification covers the general requirements for the more common types of steel wire ropes. Included in this specification are wire ropes in various grades and constructions from 1/4 in. [6 mm] to 3 1/2 in. [89 mm] manufactured from uncoated or metallic coated wire. Also included are cord products from 1/32 in. [0.8 mm] to 3/8 in. [10 mm] manufactured from metallic coated wire. For specific applications, additional or alternative requirements may apply.

1.2 The values stated in either inch-pounds or SI units are to be regarded separately as standard. Within the text, the SI units are shown in brackets. The values stated in each system are not exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in nonconformance with the specification.

1.3 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

2. Referenced Documents

2.1 ASTM Standards:2

A931 Test Method for Tension Testing of Wire Ropes and Strand

A1007 Specification for Carbon Steel Wire for Wire Rope

Use the HTML view of a document when you prefer to view the text larger than is provided in the typeset PDF view of the document. With both types of documents, you may download a copy to your device.

The screenshot shows the ASTM COMPASS website interface. At the top, there is a navigation bar with the ASTM COMPASS logo, a search bar, and user information. Below the navigation bar, there are two document selection boxes: 'ASTM A1023/A1023M-19865945-17' and 'ASTM A1023/A1023M-19865945-06'. A 'Download Redlined PDF' button and a 'Close Comparison' button are also visible. The main content area displays the document title 'Standard Specification for Low-Carbon Nickel-Chromium-Molybdenum, Low-Carbon Nickel Steel Ropes' and two tabs: 'HTML' (selected) and 'PDF'. The HTML view shows the document's scope, referenced documents, and terminology. The 'Details' sidebar on the right provides additional information such as 'ASTM Book of Standards', 'Publish Date: Jan 03, 2017', 'Subcommittee D02.14', and 'Contact Committee'.

Select two versions of a document to compare, choose “compare” and the results will appear on the page. You can always choose “edit” to change the compared version. You’ll quickly identify new additions to a document as indicated by the green highlighted text. Pink highlighted text with a strikethrough let you know what text has been removed in the newest version of a standard.

The screenshot shows the ASTM COMPASS interface. A 'Compare Versions' dialog box is open, allowing the user to select two versions of a document for comparison. The selected versions are ASTM A1023/A1023M-19865945-17 (Active) and ASTM A1023/A1023M-19865945-06. The 'Compare' button is highlighted in blue. The background shows the document page for ASTM A1023/A1023M-19865945, titled 'Standard Specification for Low-Carbon Steel Wire Ropes of Various Grades and Constructions'. The page includes sections for 'In This Standard', 'SUMMARY OF CHANGES', and 'Footnotes'.

Compass Points allows you to create a customized link to capture critical parts of a standard PDF, building a breadcrumb trail to that source data. Share the link throughout your collaboration and embed in your workflows.

The screenshot shows the ASTM COMPASS web interface. At the top, there is a search bar and navigation options like 'Track Document', 'Add to Favorites', 'Download', and 'Compare Versions'. The main content area displays the document 'ASTM D86-20a', titled 'Standard Test Method for Distillation of Petroleum Products and Liquid Fuels at Atmospheric Pressure'. Below the title, there are tabs for 'PDF', 'HTML', 'Video Content', 'Related Content', and 'Compass Points List'. The PDF viewer shows a page with a highlighted section under '9.1 Calibration and Standardization', specifically '9.1.1 Temperature Measurement System'. A blue arrow points from the text on the left to this highlighted section. Below the text, there is a table titled 'TABLE 4 True and Min and Max D86 50 % Recovered Boiling Points (°C)^a'. The table compares manual and automated distillation conditions for Toluene and Hexadecane. At the bottom of the page, there is the ASTM International logo and social media icons.

ASTM D86-20a

Standard Test Method for Distillation of Petroleum Products and Liquid Fuels at Atmospheric Pressure

PDF | HTML | Video Content | Related Content | Compass Points List

9.1 Calibration and Standardization

9.1 Temperature Measurement System—Temperature measurement systems using other than the specified mercury-in-glass thermometers shall exhibit the same temperature lag, emergent stem effect, and accuracy as the equivalent mercury-in-glass thermometer. Confirmation of the calibration of these temperature measuring systems shall be made at intervals of not more than six months, and after the system has been replaced or repaired.

9.1.1 The accuracy and the calibration of the electronic circuitry or computer algorithms, or both, shall be verified by

9.1.2.1 If the temperature reading is not within the values shown in Table 4 for the respective apparatus being used (see Note 11 and Table 4), the temperature measurement system shall be considered defective and shall not be used for the test.

9.1.2.2 Reagent grade toluene and hexadecane (cetane), conforming to the specifications of the Committee on Analytical Reagents of the American Chemical Society,³ shall be used.

TABLE 4 True and Min and Max D86 50 % Recovered Boiling Points (°C)^a

	Manual		Automated	
	Distillation conditions min D86 50 % boiling point	Distillation conditions max D86 50 % boiling point	Distillation conditions min D86 50 % boiling point	Distillation conditions max D86 50 % boiling point
Toluene	ASTMIP true boiling point 110.6	Group 1, 2, and 3 111.8	Group 1, 2, and 3 111.8	Group 1, 2, and 3 109.7
Hexadecane	ASTMIP true boiling point 287.0	Group 4 272.2	Group 4 283.1	Group 4 277.0

^a The manual and automated temperatures show in this table are the values for the 95 % tolerance interval for the 99 % population coverage. The proposed tolerance is approximately 2σ sigma. Information on the values in this table can be found in RR D06-1560.

10.2 Groups 1 and 2—Ensure that the sample is conditioned in accordance with Table 2. Fit a low range thermometer provided with a snug-fitting cork or stopper of silicone rubber, or equivalent polymeric material, tightly into the neck of the sample container and bring the temperature of the sample to the

Save your Compass Point with relevant information such as overlays or diffs.

Note the programmatic metadata included with each Compass Point, including the specific version of the standard.

Your Compass Point selection is reproduced in the metadata window for your reference so you do not have to toggle back to the main PDF while working on your metadata.

Name your Compass Point semantically to align with Project codes, ERP documents, product numbers, part numbers, test procedures, or any other useful data for holistic retrieval.

Insert this URL into any document or requirement management system for easy redirect back to the authoritative source.

If the standard is updated, your metadata window will be automatically updated to notify you that this is not the active version of the standard.

This menu includes all Compass Points created for this specific version of the standard.

The screenshot shows the ASTM COMPASS web interface for the standard 'ASTM D86-20a'. The page title is 'Standard Test Method for Distillation of Petroleum Products and Liquid Fuels at Atmospheric Pressure'. A sidebar on the right contains a 'Compass Points List' with a search bar and a 'Sort: Position' dropdown. A specific point is highlighted: 'Ust Stage' with a timestamp of 'Dec 15, 5:45 PM' and a location 'Shell site X'. A blue arrow points from the text 'After your Compass Point is saved you can retrieve the metadata from the ellipse or by clicking on the icons below the highlight.' to the 'Ust Stage' entry in the list.

After your Compass Point is saved you can retrieve the metadata from the ellipse or by clicking on the icons below the highlight.

TABLE 4 True and Min and Max D86 50 % Recovered Boiling Points (°C)^a

	Manual		Automated	
	Distillation conditions min D86 50 % boiling point	Distillation conditions max D86 50 % boiling point	Distillation conditions min D86 50 % boiling point	Distillation conditions max D86 50 % boiling point
Toluene	ASTMIP true boiling point 110.6	Group 1, 2, and 3 111.8	Group 1, 2, and 3 108.3	Group 1, 2, and 3 109.7
Hexadecane	ASTMIP true boiling point 287.0	Group 4 272.2	Group 4 283.1	Group 4 277.0

^a The manual and automated temperatures show in this table are the values for the 95 % tolerance interval for the 99 % population coverage. The proposed tolerance is approximately 2σ sigma. Information on the values in this table can be found in RR D06-1560.

However, other grades may also be used, provided it is first ascertained that the reagent is of sufficient purity to permit its use without lessening the accuracy of the determination.

Note 11—At 101.3 kPa, toluene is shown in reference manuals as boiling at 110.6 °C when measured using a partial immersion thermom-

10.2 Groups 1 and 2—Ensure that the sample is conditioned in accordance with Table 2. Fit a low range thermometer provided with a snug-fitting cork or stopper of silicone rubber, or equivalent polymeric material, tightly into the neck of the sample container and bring the temperature of the sample to the

Another place to retrieve your Compass Points is directly from the Menu.

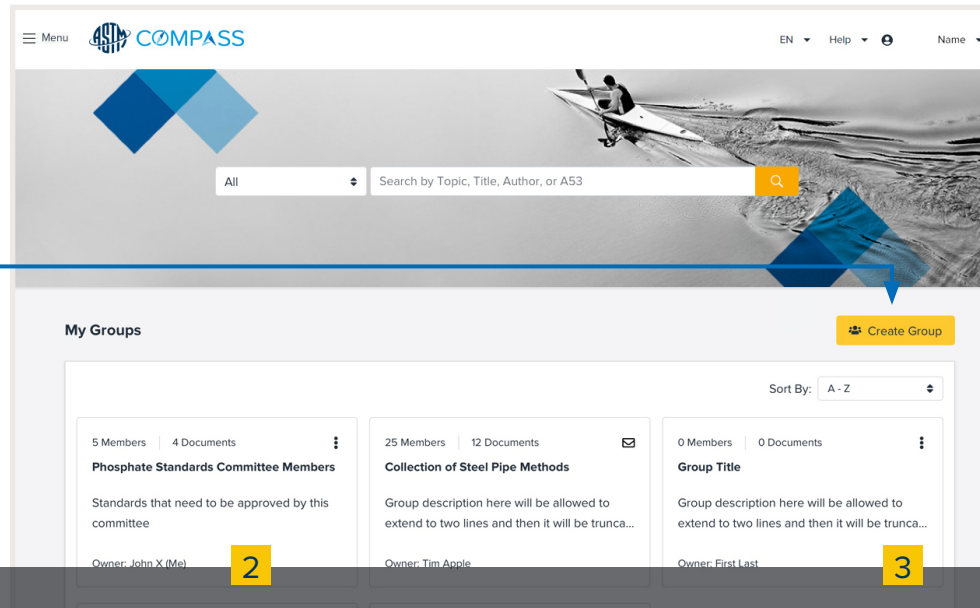

From here you will find all Compass Points created and saved by you.

The screenshot shows the ASTM Compass web application interface. On the left is a sidebar menu with options: Home, Subscriptions, Tracker, Favorites, Compass Points, Groups, eLearning, Custom Collection, Technical Committees, Join as a Member, My Committees, Meetings & Symposia, and Publish with ASTM. The main content area displays a document titled "Method for Distillation of Petroleum Products and Liquid Fuels at Reduced Pressure". Below the document title are tabs for "Video Content", "Related Content", and "Compass Points List". The "Compass Points List" tab is active, showing a list of saved points, including "Uat Stage" and "Shell site X". The document content includes a table of boiling points and a section titled "TABLE 4 True and Min and Max D86 50 % Recovered Boiling Points (°C)^a".

	Manual		Automated	
	Distillation conditions min D86 50 % boiling point	Distillation conditions max D86 50 % boiling point	Distillation conditions min D86 50 % boiling point	Distillation conditions max D86 50 % boiling point
Toluene	ASTMIP true boiling point 110.6	Group 1, 2, and 3 111.8	Group 1, 2, and 3 111.8	Group 1, 2, and 3 109.7
Hexadecane	ASTMIP true boiling point 287.0	Group 4 272.2	Group 4 283.1	Group 4 277.0

^a The manual and automated temperatures show in this table are the values for the 95 % tolerance interval for the 99 % population coverage. The proposed tolerance is approximately 2σ sigma. Information on the values in this table can be found in RR D06-1560.

Many standards have instructional videos demonstrating proper execution of test methods.

If a test method contains a video, there will be a tab underneath the title that reads "Video Content."

Additional guidance can be found in **Video Tutorials** and **More Resources** in the **Help** tab.
